

SEALING SOLUTIONS

Connect with quality

ABOUT US

Leader in static sealing solutions

KLINGER Dichtungstechnik has been working on researching, developing and producing high-quality industrial sealing material for more than 125 years.

Our company, in the meantime in the fifth generation as a family-owned enterprise is still located in Gumpoldskirchen, around 20 kilometers outside of Austria's capital, Vienna. Now serving as the sealing material manufacturing and research hub for the subsidiaries and representatives that are located in 60 countries worldwide and make up the

international KLINGER Group, KLINGER Dichtungstechnik fulfills two major roles: On the one hand, it is the innovation powerhouse for the development of revolutionary gaskets and sealing material solutions. On the other hand, the company remains wholly committed to providing the Group's business locations as well as customers and partners with its decade-spanning know-how and its certified high-quality services and products, which are in full compliance with international standards.

- » We are the industry's preferred partner for the production and development of high quality soft sealing materials all over the world.
- » We offer a wide range of CNAF, PTFE, Graphite and Mica materials.
- » We strive to lead the industry in terms of Total Cost of Ownership.
- » Our technical support combines unsurpassed material know-how with world class application expertise.
- » The KLINGER global network makes sure that our materials and services are available to you locally no matter where you are.

DEPARTMENTS

Everything from a single source

PRODUCT DEVELOPMENT

The product development department of KLINGER Dichtungstechnik represents the central development competency for static soft sealing materials. Furthermore also the entire KLINGER Group benefits from their know-how.

MATERIAL TESTING

KLINGER Dichtungstechnik operates a test laboratory offering the broadest scope of state-of-the-art test equipment. This ensures that customers can rely on the highest level of quality at any given time.

PRODUCTION

KLINGER Dichtungstechnik sets the standard in the production of technologically excellent and top-quality sealing materials. A great emphasis is continuously placed on our skilled and experienced workers to guarantee best work flow in the course of the production process.

QUALITY

In order to offer future generations a world worth living in, focusing on the highest quality and environmental compatibility in the own processes is of enormous importance for KLINGER Dichtungstechnik.

SALES & TECHNICAL SUPPORT

As the industry's preferred partner for the production and development of high-quality soft sealing materials, the sales and technical support team from KLINGER Dichtungstechnik combines unsurpassed material know-how with world-class application expertise.

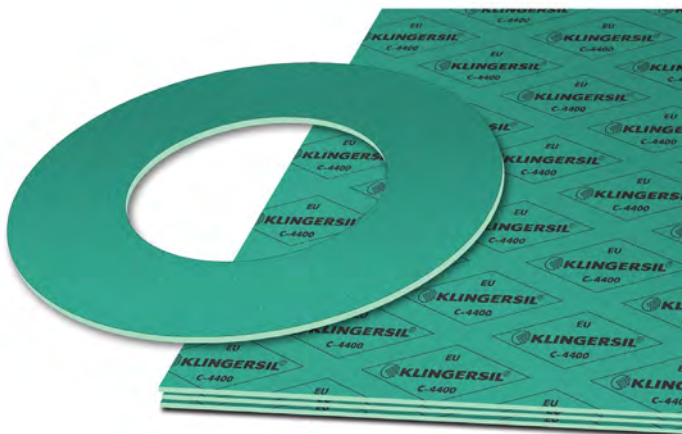

TECHNOLOGY

The technical department of KLINGER Dichtungstechnik ensures highest level of production process engineering for ongoing automation and digital transformation.

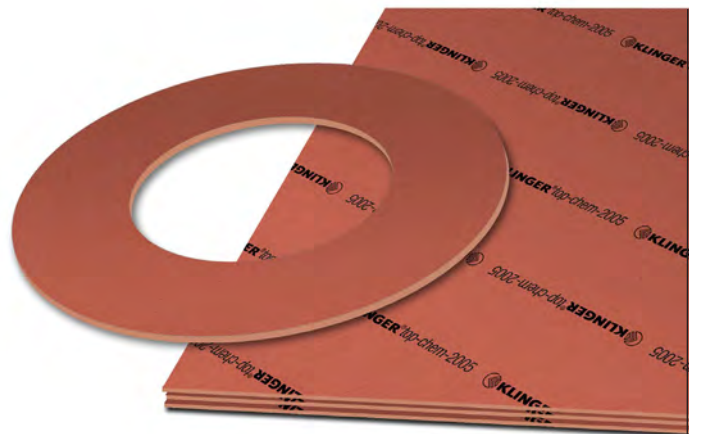

THE BASIS PORTFOLIO

The industry's broadest range of soft sealing material

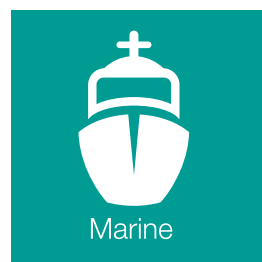

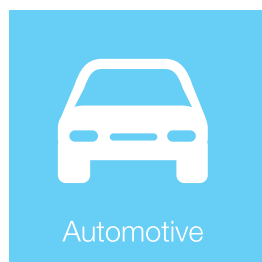

KLINGERSIL® is a range of calendered rubber based high performance sealing materials covering a wide range of applications.

KLINGER®top-chem is a range of sealing materials based on PTFE designed for high end applications and extended service life.

Our industries

KLINGER® Graphite sealing materials are designed to cope with a wide temperature range and a broad spectrum of chemicals.

KLINGER® Milam is a range of mica based sealing materials designed for highest temperature applications.

SERVICES

Digital support

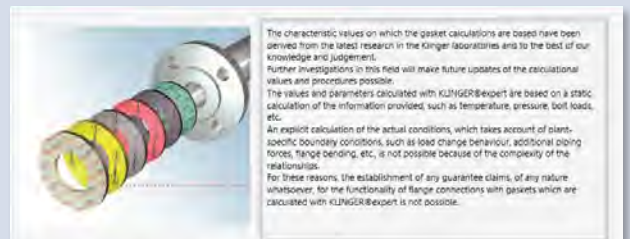

KLINGER Dichtungstechnik is proud of the long-term relationships it enjoys with its suppliers, partners and customers. Taking these to the next level, we have developed customized digital solutions to provide our customers with additional, significant benefits.

KLINGER EXPERT - OUR VERSATILE GASKET CALCULATION SOFTWARE

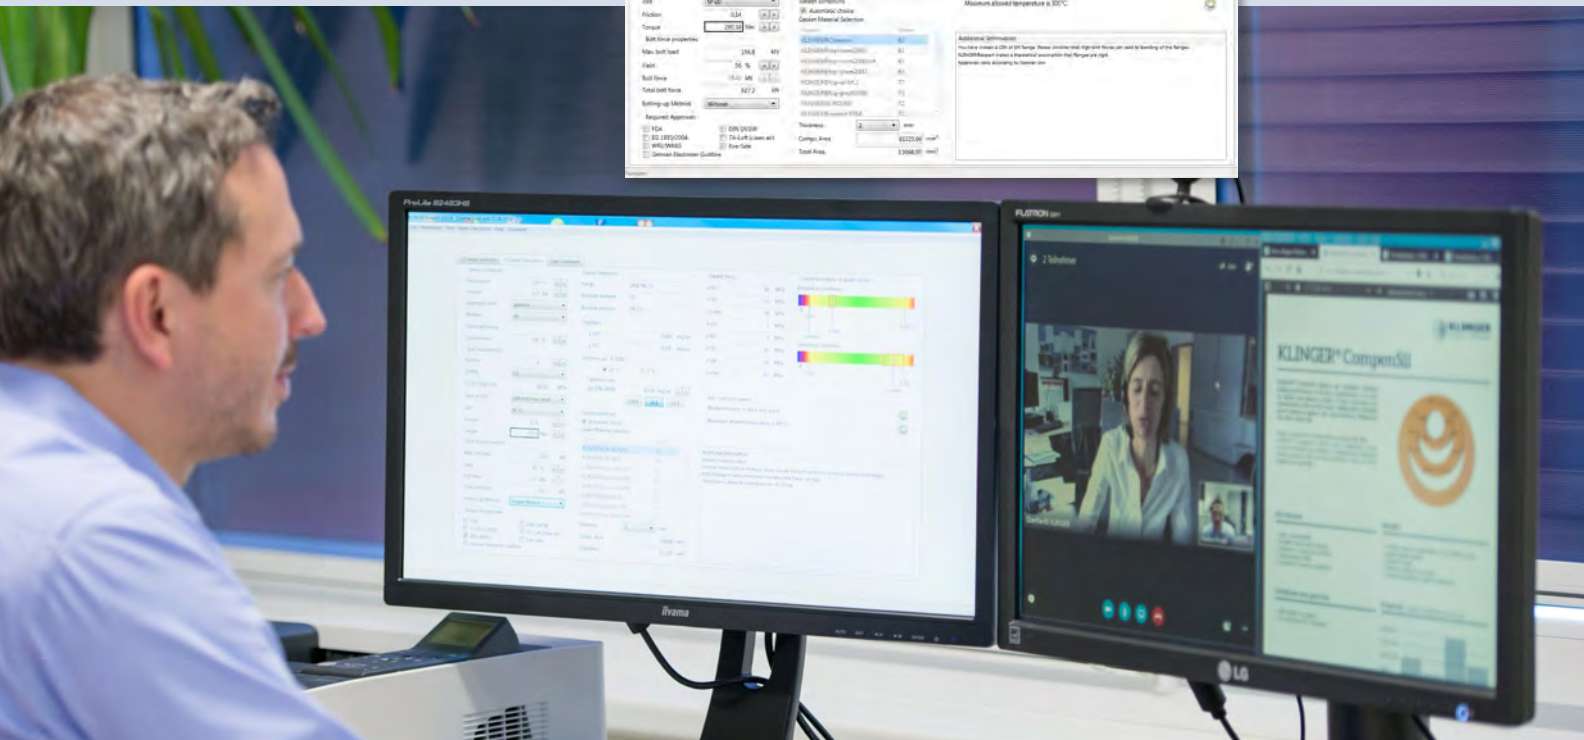

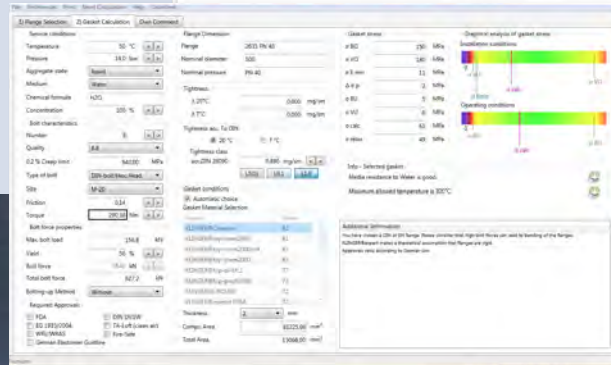

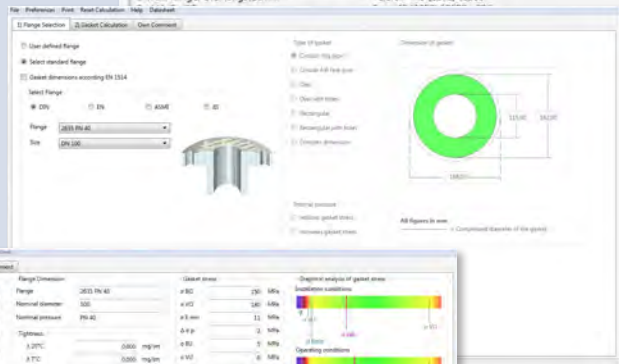

Next to the certified, high quality of the utilized material, two other factors define the “make or break” of a functioning, tight seal: The selection of a gasket suitable for both, the corresponding flange and the intended purpose/medium, and the application of the correct torque.

Focusing its significant experience and expertise, KLINGER Dichtungstechnik has developed a tool to promote and support plant safety. “KLINGER Expert” is our versatile calculation and gasket selection software, designed primarily to support the needs of technicians.

KLINGER Expert is available for download free of charge on our website.

KLINGER MATERIAL FINDER

KLINGER has always been the lead in the market place considering technical know-how, support and product solutions. Selecting the appropriate sealing material for a particular application is not an easy task. The KLINGER Dichtungstechnik material finder allows access to a smoother definition of actual required soft gasket material.

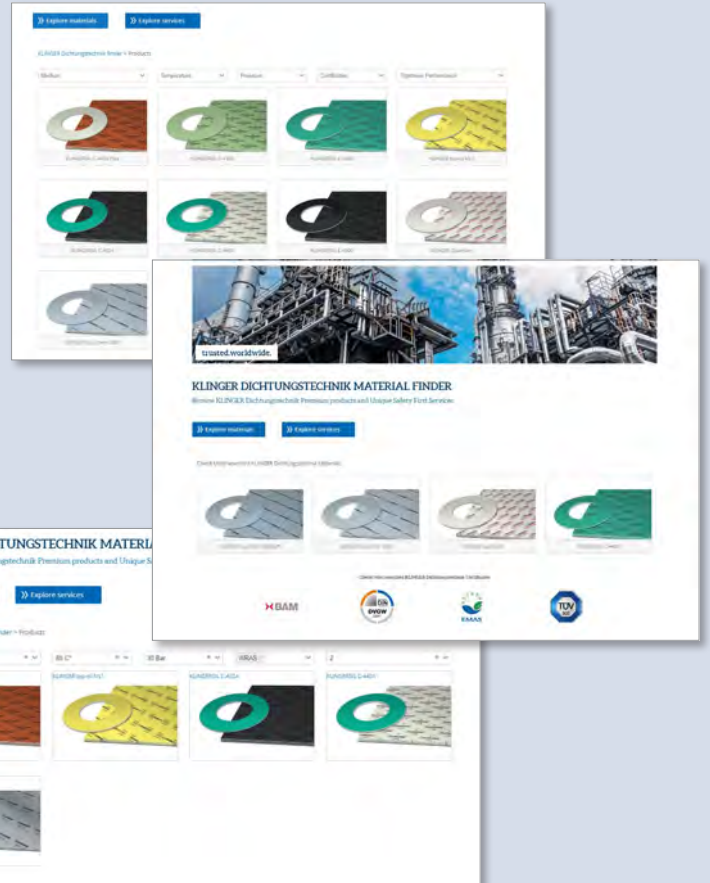

The material selector tool on the KLINGER Dichtungstechnik webpage makes the determination of the suitable material:

- » Smoother
- » Safer
- » Precise

The KLINGER Dichtungstechnik material finder enables a fast definition of the required material for almost any need.

The selection is based on the requirements from the industrial application considering:

- » Certifications
- » Pressure x temperature
- » Medium
- » Chemical resistance
- » Sealing performance

PRODUCT APPROVALS

Besides the usual requirements like tightness or resilience, in many cases gaskets have to comply with more specific specifications. Many industry sectors have established their own particular approval schemes to ensure that used gaskets fulfill these demands. KLINGER gaskets provide a wide range of product approvals for almost all common applications which are covered by such certification procedures.

SUSTAINABILITY

Today for tomorrow

EMAS - Environmental Management System

As one of the first companies in Austria, we joined the EU's voluntary environmental management system (EMAS) back in 1998. This eco-management and audit scheme of the European Union aims at improving the environmental performance of organisations. The publication of environmentally relevant data in an environmental statement is an important instrument for meeting environmental objectives.

In 2019, the "Austrian Federal Ministry for Sustainability and Tourism" presented KLINGER Dichtungstechnik with the highest national award for its environmental statement in newspaper format.

Our motivation behind our voluntary participation in an environmental management system can be summed up in a single sentence: "We wish to leave this world a little better than we found it."

UN Global Compact signed

In mid-June 2021, KDT also joined the UN Global Compact, the world's largest initiative for corporate responsibility. By signing this worldwide pact for a more social and ecological global

ization, the company commits itself to actively working towards the UN Sustainable Development Goals (SDGs). KLINGER Dichtungstechnik can contribute in particular to three development goals of the United Nations with its product portfolio and careful use of resources in the manufacturing process: "Clean water and sanitation", "Sustainable consumption and production" and "Climate protection measures".

EcoVadis Silver medal for KLINGER Dichtungstechnik

The EcoVadis certification is only awarded after a comprehensive evaluation. 21 sustainability criteria in the four subject areas of environment, labor and human rights, ethics and sustainable procurement are evaluated with the help of a questionnaire and the

results are assigned a ranking based on the industry and company size. In addition to the activities that have been implemented, CSR awards and certifications that have already been received also play a role. Since the first rating we are driven to achieve gold in future.

Extension of our integrated management system (IMS) by ISO 45001

KLINGER Dichtungstechnik has always been committed to highest operational safety, but not yet within the strict framework of a standard designed for this purpose. However, this has changed in 2021 ... KLINGER Dichtungstechnik has successfully passed the certification process for ISO 45001 – the

standard for occupational health and safety management systems.

ISO 14001 – Environmental Management Systems

Our environmental management standards are audited on a regular basis and subsequently recertified in accordance with the requirements ISO 14001. Ensuring that future generations are able to inherit a world worth living in, is also a measure we execute at a regional level.

KLINGER Dichtungstechnik is therefore proud to report that its environmental management system is also EMAS compliant.

WHAT WE STAND FOR

From words to ways of working

» MISSION

We create customer value through the manufacturing of innovative sealing materials.

The products we provide offer our customers the highest level of safety for their operations. Our know-how is based on our decades-spanning production competency and continuous development as well as on a broad spectrum of technical services, which we deliver as the leading company in the field of gaskets.

» VISION

We want to ...

- ... be the benchmark for technologically excellent and top-quality soft sealing materials, both as a manufacturer and as a developer.
- ... continue to safeguard and further enhance our global market and brand leadership position.
- ... assume social responsibility for the present and future generations as a flagship enterprise.
- ... be a fair, safe and excellent employer.

» VALUES

Our values determine our responsible actions towards our partners, customers, employees and towards the environment in which we live.

BUSINESS EXCELLENCE

We manufacture our products on the basis of internationally approved, certified quality and environmental standards. We set the standard in the production of technologically excellent and top-quality sealing materials.

CUSTOMER VALUE

Our customers come first. We do not limit ourselves to products. Instead, we provide tailored solutions in order to master their respective challenges.

GLOBAL REGIONALITY

Due to the global presence of the KLINGER Group, we are represented all over the world. As a consequence, we are also absolutely familiar with the corresponding local conditions at each customer location.

SUSTAINABILITY

Our entrepreneurial activities firmly take environmental protection into account. This is also proven by our quality and environmental standards, which we maintain in order to also offer future generations a world worth living in.

INNOVATIVE EDGE

Developing both our company and our products further is a constant process. Our power of innovation, which continuously leads to new solutions, is based on more than 130 years of experience across all industries.

PEOPLE SPIRIT

We create optimal working conditions for our employees. An open culture of communication, a good and fair working atmosphere as well as advanced training opportunities form the basis of our shared success.
